## General Terms and Conditions

The Contract comes into force by Enagic's acceptance

Replacement delivery:

In the event of lack of availability, or if the delivery is late or incomplete, no compensation will be payable except in cases of gross negligence. If the product is not available, Enagic may withdraw from the Contract; the Purchaser will be informed of this immediately. Any payments already made will then be reimbursed immediately. However, Enagic is also entitled to send a product which is equal value in terms of quality and price. The right of revocation also applies for this product.

Due payment and default:

The purchase price is payable on delivery of the contractual acceptance. Without payment Enagic is not enforced to deliver products. The customer will be in default at the latest 30 days after the payment without the need for any reminder. From the default date onward, Enagic can demand an administrative charge of €10.00 for each reminder plus debt collection costs and late-payment interest. The product remains the property of Enagic until payment has been made in full.

Despatch costs:

The costs for shipping are charged to the customer separately.

Subsequent fulfilment:

As regards any possible claim to supplementary performance, Enagic reserves the right to refuse to repair defects if this would be excessively expensive. In this case, the purchaser is entitled only to the supply of an item free of defects.

Data protection:

The data needed to handle the transaction will be recorded in order to process the order, to maintain customer relations and for own advertising purposes.

The customer may refuse to allow the latter at any time.

Notice of Cancellation Rights:

You have a right to cancel this order immediately within 14 days of the date of the order form any variation if you so wish by sending written notice of cancellation to ENAGIC Europe GmbH, D - 40210 Düsseldorf, Immermannstr .33.

In the event of an effective revocation, the goods and payment received on both sides must be returned and any benefits derived (e.g. interest) paid back. If you cannot return the goods or services received in whole or in part, or can only return these in a deteriorated state, you must make up the value, if applicable.

### á ATTENTION CUSTOMERS

As this machine is capable of generating 5 types of water, please use each model in a balanced manner. If you keep using the machine mainly at "Kangen Water" mode, minerals such as calcium and magnesium originally contained in the tap water will build up inside the machine and cause clogging and degrading the performance of electrolyzing.

Although the machine cleans itself regularly, sometimes that is not enough especially in areas where condition of water is hard and high in minerals.

Please be sure to practice the below 3 measures to avoid possible machine problems caused by calcium clogging.

1. Use the 2-stage Pre Filter (priced at EURO 50.00) to soften the water.
2. Use the Cleaning Unit at least once a month to clean inside the machine.
3. Switch to Acidic Water or "Beauty Water" mode (push yellow button) daily and let the water flow for about 1 minute.
